

Contents

[Demand Forecasting: A Data-Driven Process](#) _____
What Is New? _____
Scope _____
Coverage _____
Courseware _____
Organization _____

Chapter 1 - Embracing Change & Chance _____

Inside the Crystal Ball

Determinants of Demand _____
Demand Forecasting Defined _____
Why Demand Forecasting? _____
The Role of Demand Forecasting in a Consumer-Driven Supply Chain _____
Is Demand Forecasting Worthwhile? _____
Who Are the End Users of Demand Forecasts in the Supply Chain? _____
Learning from Industry Examples _____
Examples of Product Demand _____
Is a Demand Forecast Just a Number? _____

Creating a Structured Forecasting Process

The PEER Methodology: A Structured Demand Forecasting Process _____

Case Example: A Consumer Electronics Company

PEER Step 1: Identifying Factors Likely to Affect Changes in Demand _____
The GLOBL Product Lines _____
The Marketplace for GLOBL Products _____
Step 2: Selecting a Forecasting Technique _____
Step 3: Executing and Evaluating Forecasting Models _____
Step 4: Reconciling Final Forecasts _____

Creating Predictive Visualizations

Takeaways

Chapter 2 - Demand Forecasting Is Mostly about Data:

Improving Data Quality through Data Exploration and Visualization _____

Demand Forecasting Is Mostly about Data

Exploring Data Patterns _____
Learning by Looking at Data Patterns _____

Judging the Quality of Data

Data Visualization

Time Plots _____
Scatter Diagrams _____

Displaying Data Distributions

Overall Behavior of the Data _____
Stem-and-Leaf Displays _____
Box Plots _____
Quantile-Quantile Plots _____

Creating Data Summaries.....

Typical Values _____
The Trimmed Mean _____
Variability _____
Median Absolute Deviation from the Median _____
The Interquartile Difference _____
Detecting Outliers with Resistant Measures _____

The Need for Nonconventional Methods.....

M-Estimators _____
A Numerical Example _____

Why Is Normality So Important?

Case Example: GLOBL Product Line B Sales in Region A.....

Takeaways.....

Chapter 3 - Predictive Analytics: Selecting Useful Forecasting Techniques __

All Models Are Wrong. Some Are Useful.....

Qualitative Methods _____
Quantitative Approaches _____
Self-Driven Forecasting Techniques _____
Combining Forecasts is a Useful Method _____
Informed Judgment and Modeling Expertise _____
A Multimethod Approach to Forecasting _____

Some Supplementary Approaches.....

Market Research _____
New Product Introductions _____
Promotions and Special Events _____
Sales Force Composites and Customer Collaboration _____
Neural Nets for Forecasting _____

A Product Life-Cycle Perspective.....

A Prototypical Forecasting Technique: Smoothing Historical Patterns.....

Forecasting with Moving Averages _____
Fit versus Forecast Errors _____
Weighting Based on the Most Current History _____

A Spreadsheet Example: How to Forecast with Weighted Averages

Choosing the Smoothing Weight _____
Forecasting with Limited Data _____
Evaluating Forecasting Performance _____

Takeaways.....

Chapter 4 - Taming Uncertainty: What You Need to Know about Measuring Forecast Accuracy

The Need to Measure Forecast Accuracy

Analyzing Forecast Errors _____

Lack of Bias _____

What Is an Acceptable Precision? _____

Ways to Evaluate Accuracy

The Fit Period versus the Holdout Period _____

Goodness of Fit versus Forecast Accuracy _____

Item Level versus Aggregate Performance _____

Absolute Errors versus Squared Errors _____

Measures of bias _____

Measures of Precision _____

Comparing with Naive Techniques _____

Relative Error Measures _____

The Myth of the MAPE . . . and How to Avoid It

Are There More Reliable Measures Than the MAPE? _____

Predictive Visualization Techniques

Ladder Charts _____

Prediction-Realization Diagram _____

Empirical Prediction Intervals for Time Series Models

Prediction Interval as a Percentage Miss _____

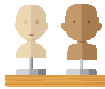

Prediction Intervals as Early Warning Signals _____

Trigg Tracking Signal _____

Spreadsheet Example: How to Monitor Forecasts

Mini Case: Accuracy Measurements of Transportation Forecasts

Takeaways

Chapter 5 - Characterizing Demand Variability: Seasonality, Trend, and the Uncertainty Factor

Visualizing Components in a Time Series

Trends and Cycles _____

Seasonality _____

Irregular or Random Fluctuations _____

Weekly Patterns _____

Trading-Day Patterns _____

Exploring Components of Variation

Contribution of Trend and Seasonal Effects _____

A Diagnostic Plot and Test for Additivity _____

Unusual Values Need Not Look Big or Be Far Out

The Ratio-to-Moving-Average Method

Step 1: Trading-Day Adjustment _____

Step 2: Calculating a Centered Moving Average _____

Step 3: Trend-cycle and Seasonal Irregular Ratios _____

Step 4: Seasonally Adjusted Data _____
GLOBL Case Example: Is the Decomposition Additive or Not?
APPENDIX: A Two-Way ANOVA Table Analysis
 Percent Contribution of Trend and Seasonal Effects _____
Takeaways

Chapter 6 - Dealing with Seasonal Fluctuations _____

Seasonal Influences
 Removing Seasonality by Differencing _____
 Seasonal Decomposition _____
 Uses of Seasonal Adjustment _____
Multiplicative and Additive Seasonal Decompositions
 Decomposition of Monthly Data _____
 Decomposition of Quarterly Data _____
 Seasonal Decomposition of Weekly Point-of-Sale Data _____
Census Seasonal Adjustment Method
 The Evolution of the X-13ARIMA-SEATS Program _____
 Why Use the X-13ARIMA-SEATS Seasonal Adjustment Program? _____
 A Forecast Using X-13ARIMA-SEATS _____
Resistant Smoothing
Mini Case: A PEER Demand Forecasting Process for Turkey Dinner Cost
Takeaways

Chapter 7 - Trend-Cycle Forecasting with Turning Points _____

Demand Forecasting with Economic Indicators
 Origin of Leading Indicators _____
 Use of Leading Indicators _____
 Composite Indicators _____
 Reverse Trend Adjustment of the Leading Indicators _____
 Sources of Indicators _____
 Selecting Indicators _____
Characterizing Trending Data Patterns
 Autocorrelation _____
 Autocorrelation Plots _____
 Detecting Autocorrelation _____
 Low-Order Autocorrelation _____
 Trend-Variance Analysis _____
Using Pressures to Analyze Business Cycles
Mini Case: Business Cycle Impact on New Orders for Metalworking Machinery
 1/12 Pressures _____

3/12 Pressures _____
12/12 Pressures _____

Turning Point Forecasting.....

Ten-Step Procedure for a Turning-Point Forecast _____
Alternative Approaches to Turning-Point Forecasting _____

Takeaways.....

Chapter 8 - Big Data: Baseline Forecasting With Exponential Smoothing

Models _____

What is Exponential Smoothing?

Smoothing Weights _____
The Simple Exponential Smoothing Method _____

Forecast Profiles for Exponential Smoothing Methods

Smoothing Levels and Constant Change _____
Damped and Exponential Trends _____
Some Spreadsheet Examples _____
Trend-Seasonal Models with Prediction Limits _____
The Pegels Classification for Trend-Seasonal Models _____
Outlier Adjustment with Prediction Limits _____
Predictive Visualization of Change and Chance – Hotel/Motel Demand _____

Takeaways.....

Chapter 9 - Short-Term Forecasting with ARIMA Time Series Models

Why Use ARIMA Models for Forecasting?.....

The Linear Filter Model as a Black Box _____

A Model-Building Strategy.....

Identification: Interpreting Autocorrelation and Partial Autocorrelation Functions _____
Autocorrelation and Partial Autocorrelation Functions _____
An Important Duality Property _____
Seasonal ARMA Process _____

Identifying Nonseasonal ARIMA Models

Identification Steps _____
Models for Forecasting Stationary Time Series _____
White Noise and the Autoregressive Moving Average Model _____
One-Period Ahead Forecasts _____
L-Step-Ahead Forecasts _____
Three Kinds of Short-Term Trend Models _____
A Comparison of an ARIMA (0, 1, 0) Model and a Straight-Line Model _____

Seasonal ARIMA Models.....

A Multiplicative Seasonal ARIMA Model _____
Identifying Seasonal ARIMA Models _____

Diagnostic Checking: Validating Model Adequacy.....

Implementing a Trend/Seasonal ARIMA Model for Tourism Demand

Preliminary Data Analysis _____
Step 1: Identification _____

Step 2: Estimation _____
 Step 3: Diagnostic Checking _____
ARIMA Modeling Checklist
Postscript.....
Takeaways.....

Chapter 10 - Demand Forecasting with Regression Models.....

What Are Regression Models?

The Regression Curve _____
 A Simple Linear Model _____
 The Least-Squares Assumption _____

CASE: Sales and Advertising of a Weight Control Product.....

Creating Multiple Linear Regression Models.....

Some Examples _____

CASE: Linear Regression with Two Explanatory Variables.....

Assessing Model Adequacy.....

Transformations and Data Visualization _____
 Achieving Linearity _____
 Some Perils in Regression Modeling _____

Indicators for Qualitative Variables.....

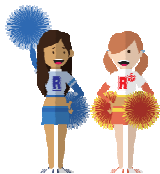

Use of Indicator Variables _____
 Qualitative Factors _____
 Dummy Variables for Different Slopes and Intercepts _____
 Measuring Discontinuities _____
 Adjusting for Seasonal Effects _____
 Eliminating the Effects of Outliers _____

How to Forecast with Qualitative Variables.....

Modeling with a Single Qualitative Variable _____
 Modeling with Two Qualitative Variables _____
 Modeling with Three Qualitative Variables _____

A Multiple Linear Regression Checklist.....

Takeaways.....

Chapter 11 - Gaining Credibility Through Root-Cause

Analysis and Exception Handling.....

The Diagnostic Checking Process in Forecasting.....

The Role of Correlation Analysis in Regression Modeling.....

Linear Association and Correlation _____

The Scatter Plot Matrix _____
The Need for Outlier Resistance in Correlation Analysis _____
Using Elasticities
Price Elasticity and Revenue Demand Forecasting _____
Cross-Elasticity _____
Other Demand Elasticities _____
Estimating Elasticities _____
Validating Modeling Assumptions: A Root-Cause Analysis
A Run Test for Randomness _____
Nonrandom Patterns _____
Graphical Aids _____
Identifying Unusual Patterns _____
Exception Handling: The Need for Robustness in Regression Modeling
Why Robust Regression? _____
M-Estimators _____
Calculating M-Estimates _____
Using Rolling Forecast Simulations
Choosing the Holdout Period _____
Rolling Origins _____
Measuring Forecast Errors over Lead Time _____
Mini Case: Estimating Elasticities and Promotion Effects
Procedure _____
Taming Uncertainty _____
Multiple Regression Checklist
Takeaways

Chapter 12 - The Final Forecast Numbers: Reconciling Change & Chance _____

Establishing Credibility
Setting Down Basic Facts: Forecast Data Analysis and Review _____
Establishing Factors Affecting Future Demand _____
Determining Causes of Change and Chance _____
Preparing Forecast Scenarios _____
Analyzing Forecast Errors
Taming Uncertainty: A Critical Role for Informed Judgment _____
Forecast Adjustments: Reconciling Sales Force and Management Overrides _____
Combining Forecasts and Methods _____
Verifying Reasonableness _____
Selecting 'Final Forecast' Numbers _____
Gaining Acceptance from Management
The Forecast Package _____
Forecast Presentations _____
Case: Creating a Final Forecast for the GLOBL Company
Step 1: Developing Factors _____
Impact Change Matrix for the Factors Influencing Product Demand _____
The Impact Association Matrix for the Chosen Factors _____
Exploratory Data Analysis of the Product Line and Factors Influencing Demand _____
Step 2: Creating Univariate and Multivariable Models for Product Lines _____

Handling Exceptions and Forecast Error Analysis _____

Combining Forecasts from Most Useful Models _____

An Unconstrained Baseline Forecast for GLOBL Product Line B, Region A _____

Step 3: Evaluating Model Performance Summaries _____

Step 4: Reconciling Model Projections with Informed Judgment _____

Takeaways

Chapter 13 - Creating a Data Framework for Agile Forecasting and Demand Management _____

Demand Management for the Supply Chain

Data-Driven Demand Management Initiatives _____

Demand Information Flows _____

Creating Planning Hierarchies for Demand Forecasting

What Are Planning Hierarchies? _____

Operating Lead Times _____

Distribution Resource Planning (DRP)—A Time-Phased Planned Order Forecast _____

Spreadsheet Example: How to Create a Time-Phased Replenishment Plan _____

A Framework for Agility in Forecast Decision Support Functions

The Need for Agile Demand Forecasting _____

Dimensions of Demand _____

A Data-Driven Forecast Decision Support Architecture _____

Dealing with Cross-Functional Forecasting Data Requirements _____

Specifying Customer/Location Segments and Product Hierarchies _____

Automated Statistical Models for Baseline Demand Forecasting

Selecting Useful Models Visually _____

Searching for Optimal Smoothing Procedures _____

Error-Minimization Criteria _____

Searching for Optimal Smoothing Weights _____

Starting Values _____

Computational Support for Management Overrides _____

Takeaways

Chapter 14 - Blending Agile Forecasting with an Integrated Business Planning Process

PEERing into the Future: A Framework for Demand Forecasting Agility.....

The Elephant and the Rider Metaphor _____

Prepare _____

Execute _____

Evaluate _____

Reconcile _____

Creating an Agile Forecasting Implementation Checklist.....

Selecting Overall Goals _____

Obtaining Adequate Resources _____

Defining Data _____

Forecast Data Management _____

Selecting Forecasting Software _____

Forecaster Training _____
Coordinating Modeling Efforts _____
Documenting for Future Reference _____
Presenting Models to Management _____
Engaging Agile Forecasting Decision Support
Economic/Demographic Data and Forecasting Services _____
Data and Database Management _____
Modeling Assistance _____
Training Workshops _____
The Forecast Manager's Checklists
Forecast Implementation Checklist _____
Software Selection Checklist _____
Large-Volume Demand Forecasting Checklist _____
Takeaways
